EUGAL: Gassing-up to start on Monday

First flow of gas through pipeline/Escaping air may cause noises

- **Kassel.** The first pipeline string of the European Gas Pipeline Link (EUGAL) will be filled with gas starting next Monday, December 2, 2019. In addition, in the northern part of the pipeline, a more than four-kilometer-long section of EUGAL will be filled with nitrogen to prevent gas from coming into contact with air. Then the entire first string of the pipeline will be filled with gas from north to south.

Over the course of gassing-up, air and nitrogen contained in the gas pressure control and measurement system in Deutschneudorf are expelled from the EUGAL pipeline. Please note that gassing-up involves using pressure that is just marginally higher than the level found in the surrounding area and therefore the escaping air may cause slight noises.

GASCADE Gastransport GmbH operates a gas pipeline network throughout Germany. The network company offers its customers cutting-edge, competitive transport services over its own long-distance high-pressure pipeline network of more than 2,400 kilometers in length in the heart of Europe.
